

## LOW NOISE AMPLIFIER **SA** SERIES

*Accurate and ultra low noise measurements of very small signals  
Achieve one of the highest levels of low noise amplification*

### Current Amplifier

#### SA-600 series

Up to  
1T V/A

#### SA-200 series

Single-ended input

### Voltage Amplifier

#### SA-400 series

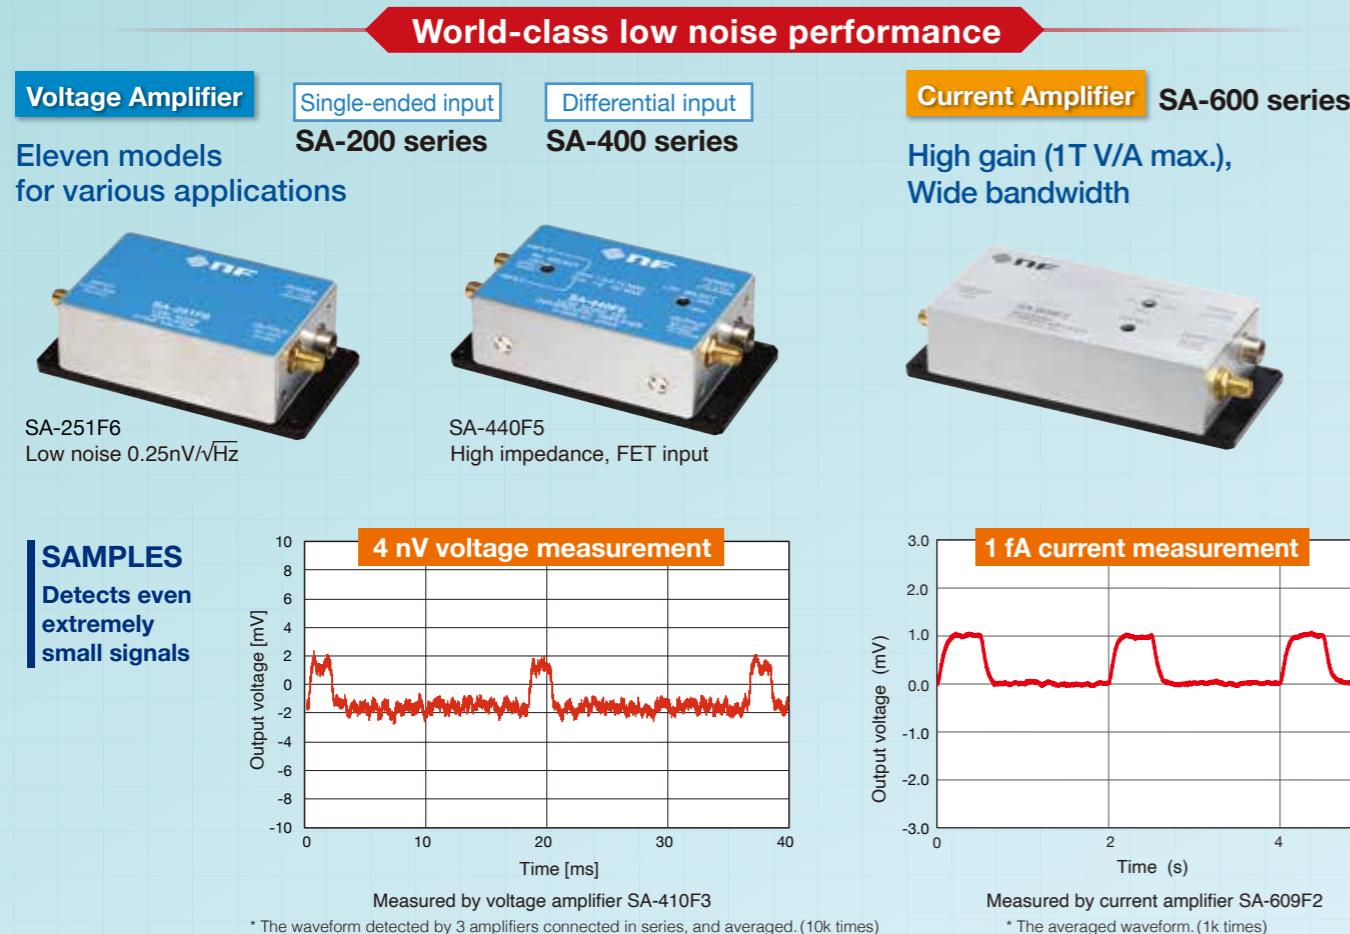

Differential input

**NF Corporation**

# NF Low Noise Amplifier Line-up that Performs High Quality Amplification of Small Signals.

In small signal measurement, it is extremely important how to faithfully amplify and optimally process the analog signal from the sensor. The SA lineup of low noise amplifiers pursue technology to minimize the factors that will interfere with measurement, such as noise and the influence of the surrounding environment.

## Lineup

### Voltage Amplifier

Voltage Amplifier	Frequency	Input form	Input impedance	Equivalent input noise voltage density*
SA-200F3	DC to 800 kHz	Single-ended, Bipolar	1 k / 10 k / 100 kΩ	0.5 nV /√Hz
SA-220F5	1 kHz to 80 MHz	Single-ended, FET	1 MΩ	0.5 nV /√Hz
SA-240F5	DC to 20 MHz	Single-ended, FET	1 M / 100 MΩ / open	1.2 nV /√Hz
SA-230F5	1 kHz to 100 MHz	Single-ended, Bipolar	50 Ω	0.25 nV /√Hz
SA-250F6	100 Hz to 250 MHz	Single-ended, Bipolar	50 Ω	0.25 nV /√Hz
SA-251F6	1 kHz to 500 MHz	Single-ended, Bipolar	50 Ω	0.25 nV /√Hz
SA-410F3	DC to 1 MHz	Differential, Bipolar	1 k / 10 k / 100 kΩ	0.75 nV /√Hz
SA-420F5	1 kHz to 70 MHz	Differential, FET	1 MΩ	0.9 nV /√Hz
SA-421F5	30 Hz to 30 MHz	Differential, FET	1 MΩ	0.5 nV /√Hz
SA-440F5	DC to 20 MHz	Differential, FET	1 M / 100 MΩ / open	1.8 nV /√Hz
SA-430F5	1 kHz to 100 MHz	Differential, Bipolar	50 Ω	0.35 nV /√Hz

### Current Amplifier

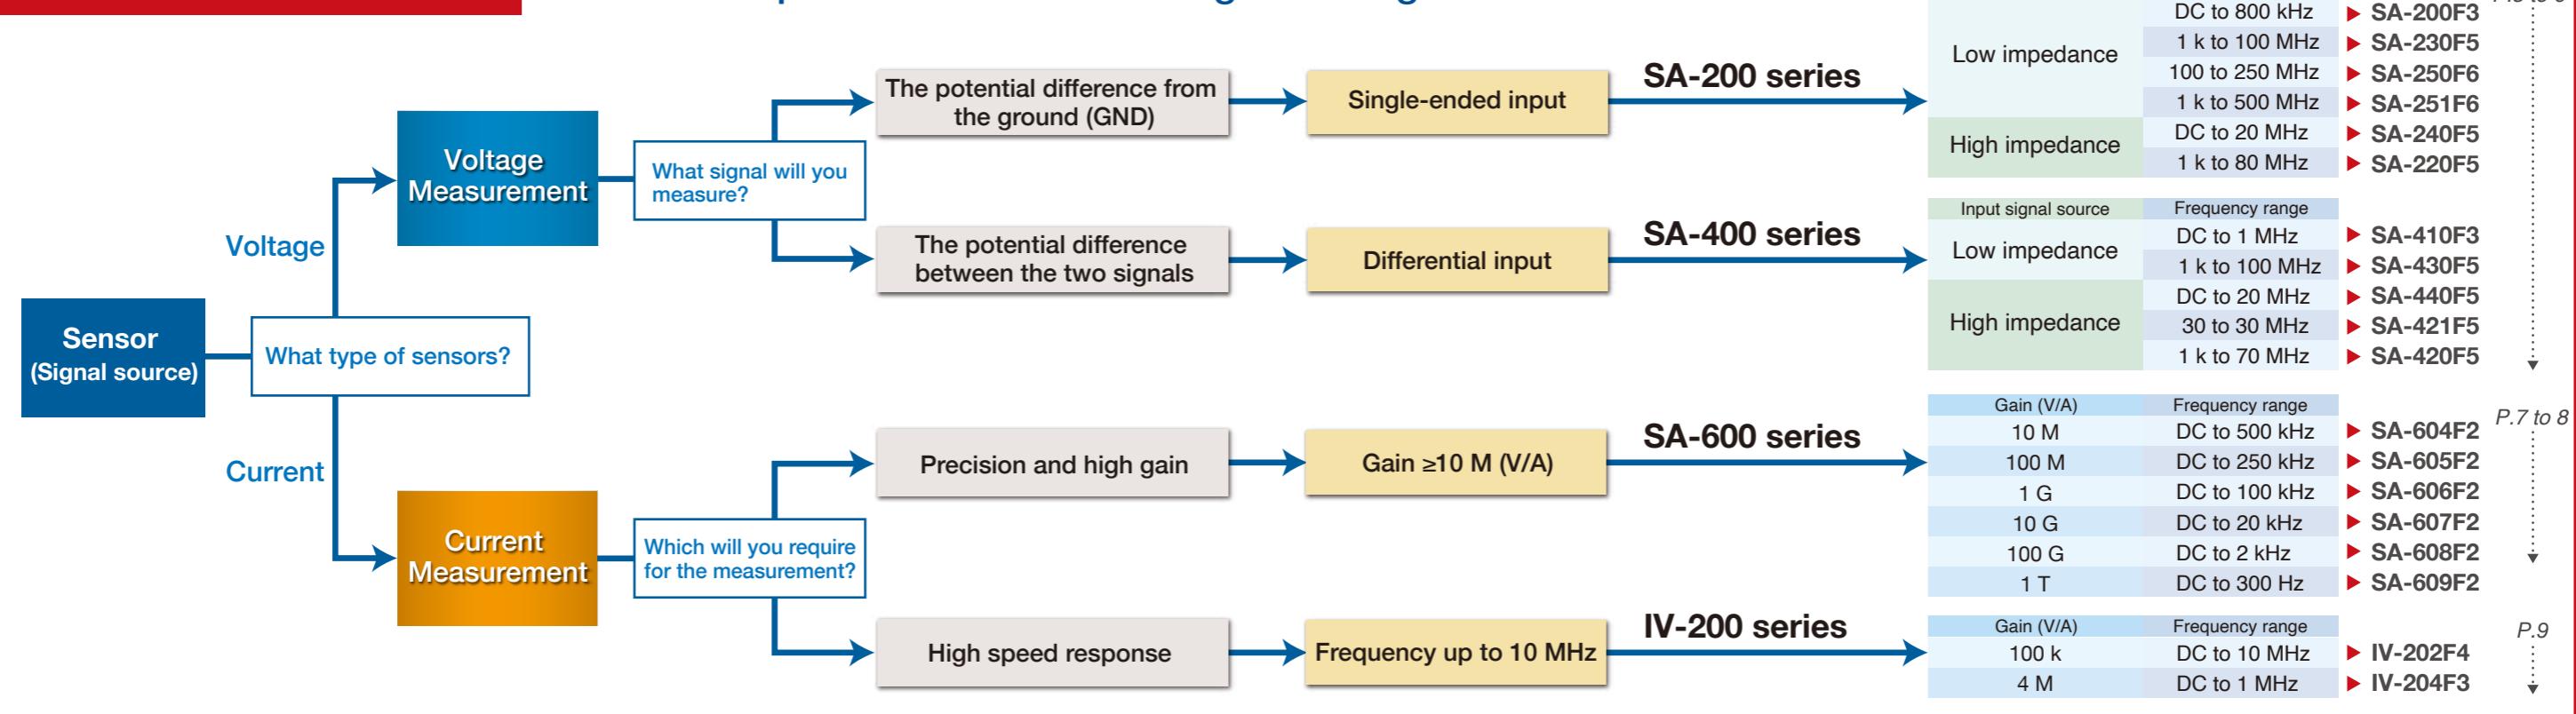

Voltage Amplifier	Frequency	Gain(V/A)	Equivalent input noise current density*
SA-604F2	DC to 500 kHz	10 M	45 fA /√Hz
SA-605F2	DC to 250 kHz	100 M	15 fA /√Hz
SA-606F2	DC to 100 kHz	1 G	6 fA /√Hz
SA-607F2	DC to 20 kHz	10 G	2.5 fA /√Hz
SA-608F2	DC to 2 kHz	100 G	0.6 fA /√Hz
SA-609F2	DC to 300 Hz	1 T	0.4 fA /√Hz

Voltage Amplifier	Frequency	Gain	Equivalent input noise current density*
IV-202F4	DC to 10 MHz	100k V/A	450 fA /√Hz
IV-204F3	DC to 1 MHz	4 M V/A	70 fA /√Hz

\* typical

## Best Selection Chart

### Select the optimum model according to the signal of the sensor.

## Low Noise Voltage Amplifier SA-200 series / SA-400 series

Our SA-200 series / SA-400 series preamplifiers detect sub micro-Volt signals and achieve ultra low noise levels previously not possible.

Eleven models are available to match differing requirements for frequency range, input form, and input impedance. SA series amplifiers are suitable as head amplifiers for sensors of various types, and they are ideal for enhancing sensitivity of analyzers or measuring instruments.

Voltage Amplifier	Frequency	Input form	Input impedance	Equivalent input noise voltage density <sup>*2</sup>	Gain
SA-200F3	DC to 800 kHz	Single-ended, Bipolar	1 k / 10 k / 100 kΩ	0.5 nV / √Hz	40 dB
SA-220F5	1 kHz to 80 MHz <sup>*1</sup>	Single-ended, FET	1 MΩ	0.5 nV / √Hz	46 dB
SA-240F5	DC to 20 MHz <sup>*1</sup>	Single-ended, FET	1 M / 100 MΩ / open	1.2 nV / √Hz	40 dB
SA-230F5	1 kHz to 100 MHz <sup>*1</sup>	Single-ended, Bipolar	50 Ω	0.25 nV / √Hz	46 dB
New SA-250F6	100 Hz to 250 MHz <sup>*1</sup>	Single-ended, Bipolar	50 Ω	0.25 nV / √Hz	40 dB
New SA-251F6	1 kHz to 500 MHz <sup>*1</sup>	Single-ended, Bipolar	50 Ω	0.25 nV / √Hz	40 dB
SA-410F3	DC to 1 MHz	Differential, Bipolar	1 k / 10 k / 100 kΩ	0.75 nV / √Hz	40 dB
SA-420F5	1 kHz to 70 MHz <sup>*1</sup>	Differential, FET	1 MΩ	0.9 nV / √Hz	46 dB
SA-421F5	30 Hz to 30 MHz	Differential, FET	1 MΩ	0.5 nV / √Hz	46 dB
SA-440F5	DC to 20 MHz	Differential, FET	1 M / 100 MΩ / open	1.8 nV / √Hz	40 dB
SA-430F5	1 kHz to 100 MHz	Differential, Bipolar	50 Ω	0.35 nV / √Hz	46 dB

\*1 Customization for high frequency measurement is available (see P.4)

\*2 typical

### Low Noise

Adoption of our proprietary circuit applying negative feedback technology.  
Input equivalent noise voltage 0.25 nV / √Hz, noise figure 0.6 dB (input impedance 50 Ω) <SA-250F6>

### Wideband

From low-frequency including DC to high-frequency / high-speed signal of 500 MHz,  
covering a wide frequency range.

### High Stability

High stability against changes in temperature and power supply voltage (SA-250F6/SA-251F6)

### Input form matched to the signal source

Single-ended input : Bipolar input, FET input  
Differential : Bipolar input, FET input

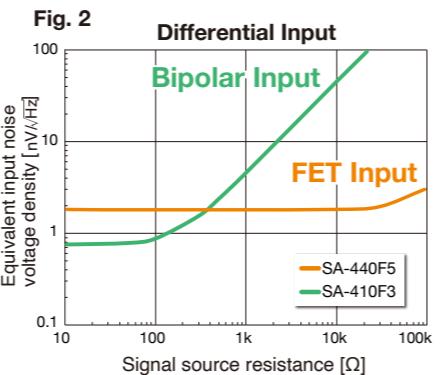

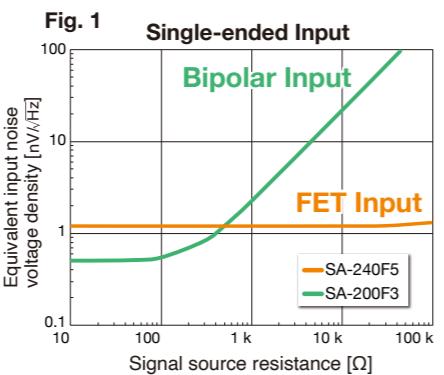

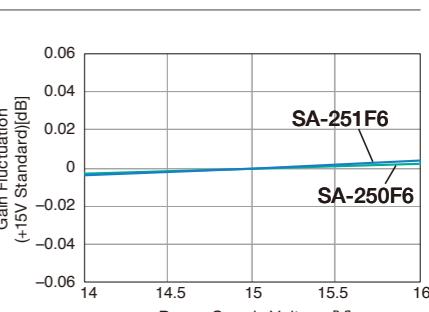

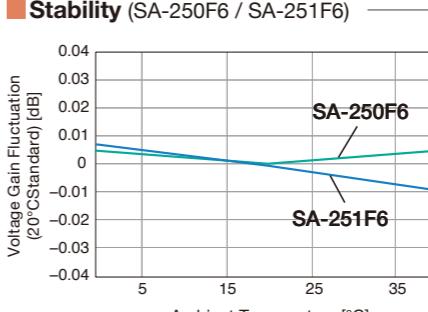

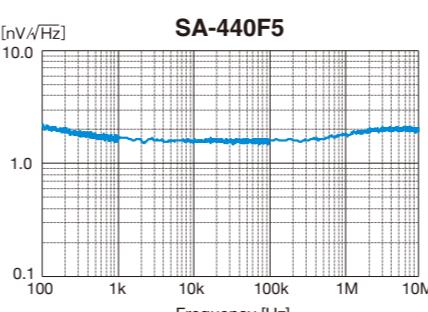

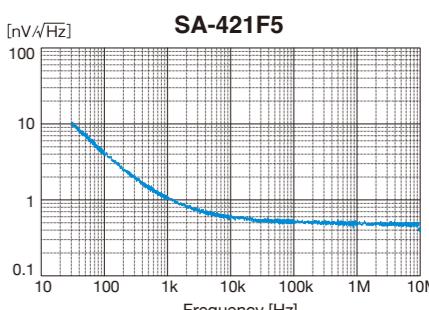

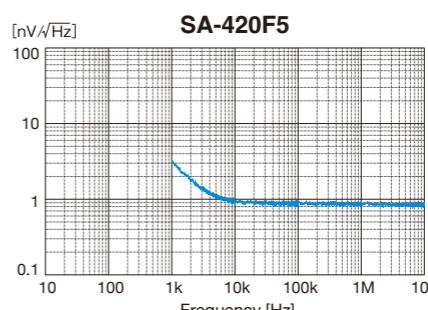

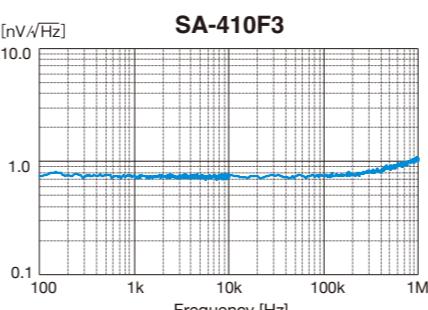

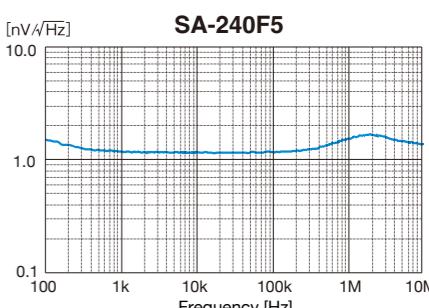

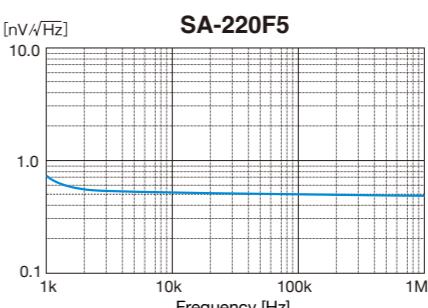

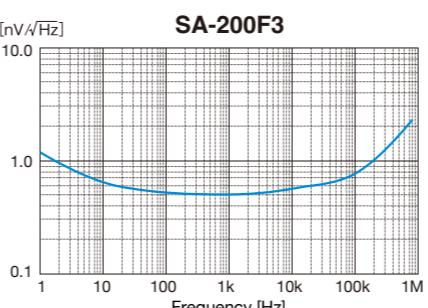

Fig. 1 and Fig. 2 show comparing the noise characteristic versus signal source resistance (sensor output resistance) for bipolar input model and FET input model.

For low signal source resistances, the bipolar input has a better noise characteristic. On the other hand, the FET input's characteristic is stable over a wide range, regardless of the signal source resistance.

Choose the model that best suits the signal source.

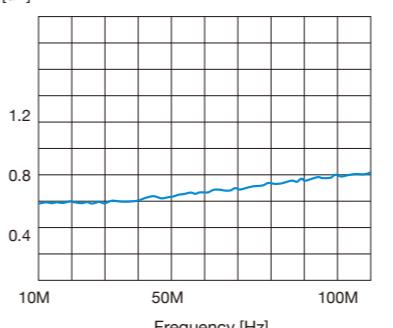

### CHARACTERISTICS

#### Equivalent input noise voltage density

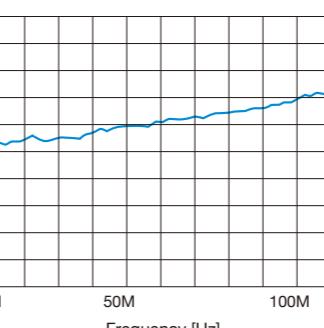

#### Noise figure

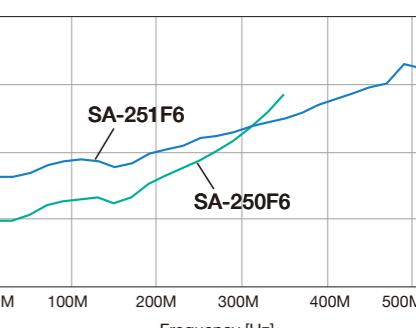

##### SA-230F5

##### SA-430F5

##### SA-250F6 / SA-251F6

### Applications

- Electromagnetic sensor for MRI/NMR systems
- High precision strain gauge sensor
- High-temperature superconducting Josephson device for microwave detection
- High speed temperature sensor
- Superconducting SQUID sensor for micro-magnetic detection
- Superconducting device in quantum computers

### Custom

Customization is available upon request.

- Change frequency response  
— expansion of low and high frequency —

Example: in the high frequency range

SA-220F5	1 kHz to 80 MHz	→ 1 kHz to 130 MHz
SA-420F5	1 kHz to 70 MHz	→ 1 kHz to 110 MHz
SA-240F5	DC to 20 MHz	→ DC to 40 MHz

- Overload recovery modification (for MRI/NMR)

Example: SA-251F6 : 8 ms → 3 μs

- Gain change according to the system  
(for example, from 46 dB to 40 dB)

- Multichannel

## SA-200 Series Specifications

## Current Amplifier

# Wideband Current Amplifier

CE

CE

### Both high gain and wideband have been achieved up to 1 T (V/A)

Six models are available with gains of 10 M / 100 M / 1 G / 10 G / 100 G / 1 T (V/A).

### Stable with capacitance of sensor and connection cable.

SA-600 series operates stably against input capacitance such as parallel capacitance of sensors and connection cables. The overshoot and the ringing rarely occur for pulse response.

### Using NF's Wideband Current Amplifier

At the conventional current amplifiers, big overshoot or ringing occurs on pulse response by additional input capacitance (see the upper right graph).

In this case, by adding feedback capacitors, overshoots can be reduced, but rise time increases significantly. The conventional current amplifiers are used with sensors of fixed input capacitance. It means standardization of the current amplifier is difficult.

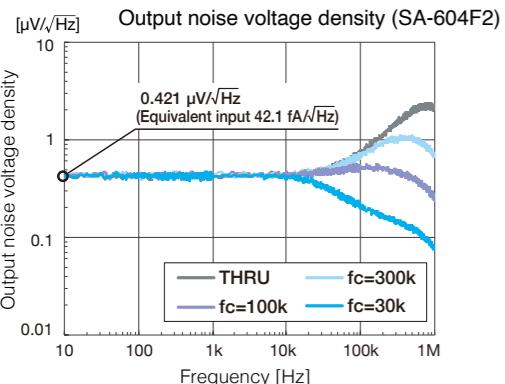

SA-600 series operates stably with capacitance of the input side, and realizes 10 times higher speed responses than the previous model.

### Low Noise

SA-600 series achieves a low noise of  $fA/\sqrt{Hz}$  ( $10^{-15}$ ) order, which adopts SMA connectors with excellent shielding effectiveness.

### LPF Output

The SA is equipped with a low pass filter to reduce high frequency noise.

### Applications

- Signal amplification of current-output sensors:  
Faraday cups, photodiodes, magnetic sensors,  
radiation sensors
- Built-in amplifier for TEM/SEM/STI/AFM
- Signal amplification for semiconductor inspection
- Beam monitor of the particle accelerator
- Ionization detector
- External preamplifier of lock-in amplifier

## SA-600 series

SA-600 series preamplifiers for detection of sub nano-Amp. signals achieve high gain and wide bandwidth that were previously not possible. Six models are available to match differing requirements for gain and frequency range.

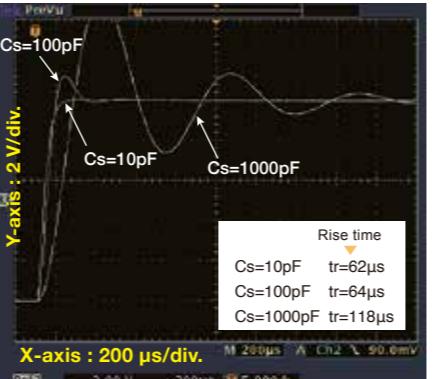

SA-600 series amplifiers are suitable as head amplifiers for current output sensors, and they are ideal for enhancing sensitivity of analyzers or measuring instruments.

Current Amplifier	Gain (V/A)	Frequency	Equivalent input current noise density <sup>*1</sup>
SA-604F2	10 M	DC to 500 kHz	45 fA / $\sqrt{Hz}$
SA-605F2	100 M	DC to 250 kHz	15 fA / $\sqrt{Hz}$
SA-606F2	1 G	DC to 100 kHz	6 fA / $\sqrt{Hz}$
SA-607F2	10 G	DC to 20 kHz	2.5 fA / $\sqrt{Hz}$
SA-608F2	100 G	DC to 2 kHz	0.6 fA / $\sqrt{Hz}$
SA-609F2	1 T	DC to 300 Hz	0.4 fA / $\sqrt{Hz}$

<sup>\*1</sup> when f = 1 kHz, when f = 100 Hz for SA-607F2, when f= 10 Hz for SA-608F2 and SA-609F2. <sup>\*2</sup> When the cut-off frequency is set at THRU. <sup>\*3</sup> "Cs" is an added input capacitance between input and GND.

### Dimensions

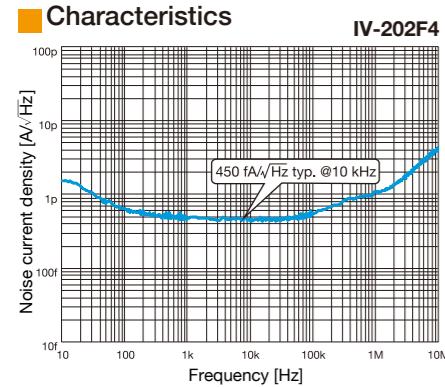

### Equivalent input noise voltage density

**Transimpedance Amplifier**

The IV-200 series is a compact current to voltage converter. It realizes wide bandwidth and low noise characteristics.

**Characteristics**

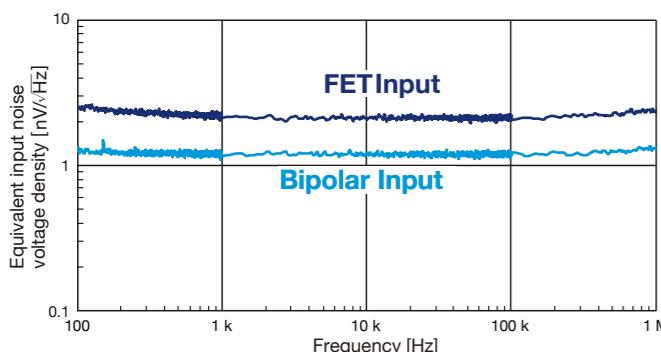

IV-202F4

**Specifications**

	DC to 10 MHz	IV-202F4	DC to 1 MHz	IV-204F3
INPUT SECTION	Input form	DC coupling, unbalanced single ended input, SMB (male)		
	Maximum input current	$\pm 100 \mu\text{A}$	$\pm 2.5 \mu\text{A}$	
	Input impedance	30 $\Omega$ or less	1.2 k $\Omega$ or less	
	Recommended signal source impedance	25 k $\Omega$ or more, 20 pF or less	1 M $\Omega$ or more, 50 pF or less	
	Input bias current	5 pA typ.		
	Equivalent input noise current density	600 fA/ $\sqrt{\text{Hz}}$ or less 450 fA/ $\sqrt{\text{Hz}}$ typ. (10 kHz, input opened)	90 fA/ $\sqrt{\text{Hz}}$ or less 70 fA/ $\sqrt{\text{Hz}}$ typ. (1 kHz, input opened)	
OUTPUT SECTION	Output form	DC coupling, unbalanced single ended output, SMB connector (male)		
	Phase between input and output	Inverting		
	Maximum output voltage	$\pm 10 \text{ V}$		
	Maximum output current	$\pm 5 \text{ mA}$		
	Output impedance	50 $\Omega \pm 10 \%$		
	Output offset voltage	$\pm 10 \text{ mV}$ (Input opened)		
AMPLIFIER SECTION	Gain	$1 \times 10^5 \text{ V/A} \pm 5 \%$	$4 \times 10^6 \text{ V/A} \pm 5 \%$	
	Frequency bandwidth	DC to 10 MHz (Based on 10 kHz, +1 to -3 dB)	DC to 1 MHz (Based on 10 kHz, +1 to -3 dB)	
	Power input	DF11-4DP-2DS(52) (4 pins, male) Hirose Electric		
	Operating supply voltage range	$\pm 15 \text{ V} \pm 1 \text{ V}$		
	Consumption current	$\pm 40 \text{ mA}$ or less, $\pm 25 \text{ mA}$ typ. (no signal)		
	Adjuster for frequency response	Adjustable frequency response, If large input parallel capacitance is connected.		
GENERAL	Performance guarantee temperature range	23°C $\pm 5^\circ\text{C}$		
	Temperature and humidity ranges	Operating: 0°C to 40°C, 10 % RH to 90 % RH Storage: -10°C to 60°C, 10% RH to 80% RH		
	External dimensions / Weight	80(W)x15(D)x21(H) mm (without protrusions) / Approx. 25 g		
	RoHS	Directive 2011/65/EU		
	Accessories	Instruction manual, Power supply cable (DF11-4DS-2C connector (4 pins, female), Hirose Electric)		

**Custom****Multichannel Low Noise Amplification System**

**Sensors, from low resistance to high resistance — Highly accurate signal processing**

For Multichannel  
Needs**The world's Leading Low Noise Performance**

We propose the optimal system according to the requirements

■ Multi-channeling to suit the application

■ Single-ended input

For signals requiring even lower noise, a single-ended input dedicated model (0.8 nV/ $\sqrt{\text{Hz}}$ ) is also available.

**IV-200 series****Custom****Low noise amplifier for small AC signal measurement**

For measuring small AC signals on the order of  $\mu\text{V}$  superimposed on DC signals.

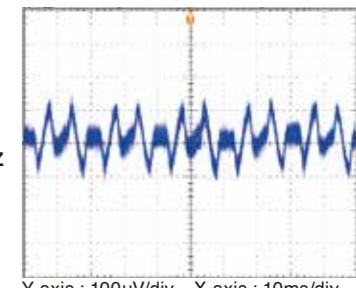

Single-ended input

- Applicable up to  $\pm 40 \text{ VDC}$
- Low noise :  $2 \text{ nV} / \sqrt{\text{Hz}}(1 \text{ kHz})$
- High gain and wide bandwidth : 60 dB, 0.1 Hz to 3 MHz
- LPF : 3 Hz, 10 Hz, 100 Hz, 1 kHz, 10 kHz, 100 kHz, 1 MHz, THRU

►► Differential input model is available. Contact us for further details.

Output noise waveform of DC power supply (output 15 V)

Y-axis : 100  $\mu\text{V}/\text{div}$ . X-axis : 10 ms/div.

**LP series enable the optimal performance of SA series amplifiers**

**Low Noise DC Power Supply****LP series**

Highly stable DC power supply with extremely low output noise voltage, thorough noise resistance, and ultra low noise design. The SA series meets severe low noise demands when used in conjunction with an LP power supply.

**LP5394**

The output noise voltage is at most 10  $\mu\text{Vrms}$ . This represents the highest standard of low-noise DC power supplies, yet we are able to offer the LP series at reasonable prices. Additionally, we have incorporated low-noise and highly stable reference voltage sources to achieve a level of temperature stability higher than conventional DC power supplies by a factor of 5 to 10. Our power supplies have the capability to provide stable and reliable power for extended periods of time.

- Low Noise : Output Noise:10  $\mu\text{Vrms}$  or lower (typ.) 10 Hz to 20 MHz bandwidth
- Low Drift : Output Voltage Stability:  $\pm 10 \text{ ppm}/^\circ\text{C}$  (typ.)
- Output Voltage : 0 to  $\pm 15 \text{ V}$
- Output Current : 0.1 A max.
- Precisely adjusts the output voltage using the 10-turn potentiometer
- 1/4-rack sized for easy integration into multi-channel rack

CE

**LP5393**

With an output noise voltage of 10  $\mu\text{Vrms}$  at most, the LP5393 DC power supply maximizes the performance capabilities of our SA series of low noise amplifiers.

- Output Noise : 10  $\mu\text{Vrms}$  or lower (typ.) 10 Hz to 20 MHz bandwidth
- Output Voltage Stability :  $\pm 20 \text{ ppm}/^\circ\text{C}$  (typ.)
- Output Voltage :  $\pm 12 \text{ V}$  to  $\pm 15 \text{ V}$
- Output Current : 0.1 A max.
- 1/4-rack size

CE

**Low Noise DC Voltage Source****LP6016-01 / LP6016-01P**

LP6016-01/LP6016-01P is a low voltage DC voltage source equipped with LAN/USB/RS-232 interface. It can be used as a DC bias source for photodiodes and a control voltage source for crystal oscillators.

- Output Noise : 10  $\mu\text{Vrms}$  10 Hz to 20 MHz bandwidth
- Output Voltage Stability :  $\pm 10 \text{ ppm}/^\circ\text{C}$  typ.
- Output Voltage : [LP6016-01] 0 to +16.1 V(+) / 0 to -16.1 V(-)  
[LP6016-01P] 0 to +16.1 V(2 outputs V1, V2)
- Setting Resolution : 500  $\mu\text{V}$
- Setting Accuracy :  $\pm (0.03 \% + 250 \mu\text{V})$
- Output Current : 0.1 A max.
- Interface : USB, RS-232, LAN

Remote controllable

CE

## Ordering Information

### SA-200 series / SA-400 series

Model	Description
SA-200F3	Low Noise Amplifier
SA-220F5	Low Noise FET Amplifier
SA-240F5	Low Noise FET Amplifier
SA-230F5	Low Noise Amplifier
SA-250F6	Low Noise Amplifier
SA-251F6	Low Noise Amplifier
SA-410F3	Low Noise Differential Amplifier
SA-420F5	Low Noise Differential FET Amplifier
SA-421F5	Low Noise Differential FET Amplifier
SA-440F5	Low Noise Differential FET Amplifier
SA-430F5	Low Noise Differential Amplifier

### SA-600 series

Model	Description
SA-604F2	Wideband Current Amplifier
SA-605F2	Wideband Current Amplifier
SA-606F2	Wideband Current Amplifier
SA-607F2	Wideband Current Amplifier
SA-608F2	Wideband Current Amplifier
SA-609F2	Wideband Current Amplifier

### Option

PA-001-2985 SMA Shorting Plug (for SA-200 and SA-400 series)

PA-001-2986 SMA to BNC Adapter (for all SA series)

PA-001-3017 SMB to BNC Adapter (for IV-200 series)

### IV-200 series

Model	Description
IV-202F4	Transimpedance Amplifier
IV-204F3	Transimpedance Amplifier

### Low Noise DC Power Supply

Model	Description
LP5393	Low Noise DC Power Supply
LP5394	Low Noise DC Power Supply

### Low Noise DC Voltage Source

Model	Description
LP6016-01	Low Noise DC Voltage Source
LP6016-01P	Low Noise DC Voltage Source

### Option (LP5393 / LP5394)

PA-001-2590 BNC Adapter

PA-001-2591 Binding Post Adapter

PA-001-2372 Output Cable A(2m)

[ for •SA-600 series •SA-410F3 •SA-240F5 •SA-250F6 •SA-251F6 ]

[ for •SA-440F5 •PA-001-2590 •PA-001-2591 ]

PA-001-2373 Output Cable B(2m)

[ for •SA-200F3 •SA-220F5 •SA-420F5 •SA-421F5 •SA-430F5 ]

PA-001-2374 Output Cable C(2m) [ for •SA-230F5 ]

PA-001-3029 Output Cable D(2m) [ for •IV-200 series ]

PA-001-2642 Rack Mount Kit (EIA, for 4 units) [ for •LP5393 ]

PA-001-2643 Rack Mount Kit (JIS, for 4 units) [ for •LP5394 ]

PA-001-2590  
BNC Adapter

Output conversion to BNC connector

\*Output cable A is required

PA-001-2591  
Binding Post Adapter

Output conversion to Binding post

\*Output cable A is required

### Special Website

Competitive Comparison data showing our low noise performance is available on our website.  
NF also offers custom-designed amplifiers in addition to the line up in this brochure.
